

The Chatuge Village Community Association, Inc.

P.O. Box 738

Hayesville, North Carolina 28904

CVCA policy regarding Village water supply lines and shutoff valves:

The general policy for CVCA regarding Village water supply and shutoff valves is as follows:

- Any supply line issues *from* the road or CVCA water supply line shut-off valve are the responsibility of the owner.
- In the case where no shutoff valve is present at the CVCA water supply line—for a dwelling which has already been built and connected to the CVCA water system—CVCA will be responsible for the cost of installation of a new shutoff valve.
- This is the same standard policy most municipalities use.

New shutoff valve installation and connection to the CVCA water system

Members shall make such requests in writing, using the CVCA Water connection Request application.
